

S-K-I-N (A parody sung to the tune of “YMCA”)	While the foll-i-cles grow our hair Oil glands, there is sebum produced Keeps our skin moist, and our skin waterproof And the sweat glands, sweat comes out of our pores To help us maintain temperatures!
Verse 1 You there! Tanning skin in the sun! Epidermis, damage may have begun That top layer helps protect us from harm Like bacteria and bad germs Your skin is shedding from head to toe While it’s making many new cells below Plus the pigment, melanin is displayed It protects us from U-V rays!	
Chorus I’m all wrapped up in my S-K-I-N I’m all wrapped up in my S-K-I-N It makes vitamin D, keeps your body waste free Stops infections from getting to me!	Chorus I’m all wrapped up in my S-K-I-N I’m all wrapped up in my S-K-I-N It makes vitamin D, keeps your body waste free Stops infections from getting to me!
Verse 2 Derm-is, the second layer of skin With blood vessels all around us within And nerve endings let us feel what’s out there	Verse 3 Bottom sub-cu-ta-ne-ous skin Mostly fatty so it holds the heat in Shock absorbing—when you bump and you bruise And it holds—skin-to our tissues!
	Chorus I’m all wrapped up in my S-K-I-N I’m all wrapped up in my S-K-I-N It makes vitamin D, keeps your body waste free Stops infections from getting to me!
